### Development of low-cost antimony-based complex flame retardant STOX-501

With surging prices for antimony trioxide, flame retardants which can create a cost-performance advantage are demanded. In response to such needs, we ensure delivery of a low-cost product of high quality and stable supply as before by adding STOX-501, a complex flame retardant comprised of natural minerals and antimony trioxide, to our line-up of products. This new product STOX-501 is roughly the same as antimony trioxide in flame retardant effectiveness, as a flame retardant additive used in combination with vinyl chloride resin or a halogen-based flame retardant.
